

Mission Statement:
For this project, I chose to improve the website of a Chinese restaurant my family and I go to called Frying Fish. They serve very good food and we often go there for their live fish. However, there website needs a lot of improvement, especially in organization. Thus, I would like to use the coding skills we've learned from this class to make the website more visually pleasing, easier to track, and more accessible.

- What works:**
- the menu is overall pretty good
 - The footer is informative and visually appealing
 - A side nav for the menu
 - Has good backgrounds

- What needs work:**
- Random text that sometimes overlap
 - A lot of text is in Chinese so non-Chinese speakers cannot read it
 - Random tan box at the bottom
 - Information isn't organized (deliveries and new dishes)
- What I will do to help it improve:**
- Translating the Chinese so that there is also English text
 - Fixing the overlapping text and organizing the other texts to be more readable
 - Delete the tan box at the bottom

Color Palette

-  **Primary**
-  **Secondary**
-  **Background**

I chose these colors to emphasize the origins of the restaurant, which is China, and also the color scheme within the restaurant itself. However, I didn't want to make the colors too bright and flashy, so I muted them a little bit to make it more pleasing for the visitor's eyes. I also didn't want to change the colors of the original website too much, but I thought they already captured the essence of the restaurant pretty well.

Fonts:
Transat Text:

- Black
- Bold
- Standard

I chose these fonts because they are easy to read and fits nicely with the restaurant theme.
